9.Implement the image scaling techniques to resize the images to both bigger and small sizes

code;

```
import cv2
import matplotlib.pyplot as plt

# Read the image
img = cv2.imread(
    r"C:\Users\ROHIT\Pictures\Screenshots\Screenshot 2026-10-01 150118.png"
)

if img is None:
    print("Image not found!")
else:
    # Resize to bigger size
    bigger = cv2.resize(
        img, None, fx=2, fy=2,
        interpolation=cv2.INTER_LINEAR
    )

    # Resize to smaller size
    smaller = cv2.resize(
        img, None, fx=0.5, fy=0.5,
        interpolation=cv2.INTER_AREA
    )

    # Convert BGR to RGB
    img = cv2.cvtColor(img, cv2.COLOR_BGR2RGB)
    bigger = cv2.cvtColor(bigger, cv2.COLOR_BGR2RGB)
    smaller = cv2.cvtColor(smaller, cv2.COLOR_BGR2RGB)
```

```
# Display images
plt.figure(figsize=(10, 4))

plt.subplot(1, 3, 1)
plt.imshow(img)
plt.title("Original Image")
plt.axis("off")

plt.subplot(1, 3, 2)
plt.imshow(bigger)
plt.title("Bigger Image")
plt.axis("off")

plt.subplot(1, 3, 3)
plt.imshow(smaller)
plt.title("Smaller Image")
plt.axis("off")

plt.tight_layout()
plt.show()
```

output

Original Image

Bigger Image

Smaller Image
